

1583

Treason and flight of Francis
of Anjou

1583

English
Sir Humphrey Gilbert (Brother of Sir
Walter Raleigh), inspired by a royal
charter and a grant of the most
extensive privileges in the event
of success, set out in 1583 to
extend English sovereignty over
the American seaboard. The
flax was conferred in Newfoundland
when he left Newfoundland travelling

north, he got no farther than Sable
Island (off Cape Breton). Here he lost his
principal ship, the DELIGHT, together
with all his maps & plans, and the
materials he had collected as a basis for
future operations and was compelled to
turn homeward, a broken-hearted
man. The episode of his death in
mid-Atlantic

Pendulum

@ age 19

Galileo discovered the principle of the pendulum. He had watched the oscillation of different lamps hung in a Cathedral, and timed them by his pulse, the only means available. He noted the surprising fact that the interval was much the same whatever the extent of the swing.

He designed, though he never made,
a clockwork machine to keep a
pendulum swinging, but it did
not occur to him to give it a hand
and a dial for use as a clock.

1633 Brought before Inquisition
1992 Pope exonerated him.
